# **py-trello Documentation**

***Release 0.2.3***

**Adrien Lemaire, Kyle Valade, Rick van Hattem**

**Jun 30, 2017**

---

## Contents

---

<b>1 Modules</b>	<b>1</b>
1.1 trello package . . . . .	1
1.1.1 Module contents . . . . .	1
1.1.2 Submodules . . . . .	1
1.1.3 trello.util module . . . . .	1
<b>2 Readme</b>	<b>3</b>
<b>3 Install</b>	<b>5</b>
<b>4 Usage</b>	<b>7</b>
<b>5 Getting your Trello OAuth Token</b>	<b>9</b>
<b>6 Required Python modules</b>	<b>11</b>
<b>7 Tests</b>	<b>13</b>
<b>8 Contributors</b>	<b>15</b>
<b>9 Indices and tables</b>	<b>17</b>

# CHAPTER 1

---

## Modules

---

### **trello package**

**Module contents**

**Submodules**

**trello.util module**

# CHAPTER 2

---

## Readme

---

A wrapper around the Trello API written in Python. Each Trello object is represented by a corresponding Python object. The attributes of these objects are cached, but the child objects are not. This can possibly be improved when the API allows for notification subscriptions; this would allow caching (assuming a connection was available to invalidate the cache as appropriate).

I've created a [Trello Board](#) for feature requests, discussion and some development tracking.

# CHAPTER 3

---

## Install

---

```
pip install py-trello
```

# CHAPTER 4

---

## Usage

---

```
from trello import TrelloClient

client = TrelloClient(
    api_key='your-key',
    api_secret='your-secret',
    token='your-oauth-token-key',
    token_secret='your-oauth-token-secret'
)
```

Where `token` and `token_secret` come from the 3-legged OAuth process and `api_key` and `api_secret` are your Trello API credentials that are ([generated here](#)).

# CHAPTER 5

---

## Getting your Trello OAuth Token

---

Make sure the following environment variables are set:

- TRELLO\_API\_KEY
- TRELLO\_API\_SECRET

These are obtained from the link mentioned above.

TRELLO\_EXPIRATION is optional. Set it to a string such as ‘never’ or ‘1day’. Trello’s default OAuth Token expiration is 30 days.

Default permissions are read/write.

More info on setting the expiration here: <https://trello.com/docs/gettingstarted/#getting-a-token-from-a-user>

Run

```
python ./trello/util.py
```

# CHAPTER 6

---

## Required Python modules

---

Found in requirements.txt

# CHAPTER 7

---

## Tests

---

To run the tests, run `python -m unittest discover`. Four environment variables must be set:

- `TRELLO_API_KEY`: your Trello API key
- `TRELLO_TOKEN`: your Trello OAuth token
- `TRELLO_TEST_BOARD_COUNT`: the number of boards in your Trello account
- `TRELLO_TEST_BOARD_NAME`: name of the board to test card manipulation on. Must be unique, or the first match will be used

To run tests across various Python versions, `tox` is supported. Install it and simply run `tox` from the `py-trello` directory.
